SUMMARY

Computer Engineering graduate and M.Sc. Cybersecurity candidate with internship experience across industrial robotics, mobile development, and information security. Skilled in Python, Java, C#, C++, and SQL, with a proven ability to design and deliver AI-driven and full-stack software projects.

EXPERIENCE

RO Technical Support Intern — FANUC

June 2025 – July 2025

- Gained practical experience in robot programming, simulation, maintenance, and troubleshooting of industrial robotic systems.

Mobile Application and Development Intern — Enerjisa

August 2024 – September 2024

- Created software solutions with Swift for mobile platforms.

Information Security Intern — Enerjisa

July 2024 – August 2024

- Enhanced cyber security measures to mitigate potential threats.

EDUCATION

M.Sc. in Cybersecurity — Marmara University

Feb 2026 – Present

B.Sc. in Computer Engineering — Doğuş University

2020 – 2025

GPA: 3.0 / 4.0 | Honor Certificate

PROJECTS

Finlora — Trendyol Seller Profitability & Analytics Panel

- Built a Flask-based SaaS panel that pulls order and revenue data from the Trendyol Supplier API and computes net profitability from product costs, shipping tariffs, and manual expenses; features a metrics dashboard (revenue, cancellations, commission, VAT), bcrypt-based user authentication, per-user API credential management, and Excel-based product-cost synchronization.

Technologies: Python, Flask, Flask-SQLAlchemy, Flask-Login, Flask-Bcrypt, Flask-WTF, Flask-Migrate, MySQL/SQLite, pandas, openpyxl, REST API

Ballinc — Football Match Prediction System & Telegram Bot

- Built a machine-learning system predicting match outcomes, over/under 2.5 goals, and both-teams-to-score probabilities from xG data (Understat, SofaScore; incl. Turkish Süper Lig), using engineered features such as last-5-match moving averages and home/away form with data-leakage prevention; served predictions through an inline-menu Telegram bot.

Technologies: Python, scikit-learn, pandas, ScraperFC, python-telegram-bot, Parquet

Alicidan — Reverse Marketplace Platform (In Development)

- Designing and building a reverse marketplace for the Turkish market where buyers post purchase requests and sellers submit competing bids; covers full user flows, seller rating/badge system, escrow-based payment integration, and a commission-driven monetization model.

Technologies: React, Node.js, PostgreSQL, REST API

Strategical Review and Overview of Netflix

- Conducted strategic analysis using SWOT, CPM, BCG, and SPACE matrices; proposed improvements including AI integration, regional content expansion, and new pricing models.

Data Mining and Knowledge Discovery

- Analyzed national anthems using prompt engineering with ChatGPT, focusing on emotional tone, keyword frequency, and structure; generated a fictional anthem using AI tools.

A Principled Plan for a Bank Website

- Defined system requirements and developed UML diagrams (use case, class, activity, sequence) to map out banking platform functionality and user interactions.

.NET-Based Video Management System

- Developed a secure video platform with .NET, including content upload, moderation, and user authentication; implemented an admin panel with role-based access.

SKILLS

Programming & Technical: Python, Java, C#, C++, SQL, HTML/CSS, MS Word, MS Excel, MS PowerPoint, MS Outlook, Google Workspace, Python, JavaScript, TypeScript, C, C++, Java, C#, SQL, Bash/Shell Script, Flask, Django, Node.js, Express.js, React, Next.js, Tailwind CSS, REST API, PostgreSQL, Git, GitHub, Docker, Kubernetes, Postman, VS Code, Vercel, AWS, NumPy, scikit-learn, Jupyter Notebook.

Professional: Leadership, Management, Problem Solving, Coordination, Creative Thinking, Negotiation, Critical Thinking

LANGUAGES

Languages: Turkish (Native) · English (B2, Upper-Intermediate)
